Summary

Software Engineer with ~4 years' experience building and operating production-grade backend, full-stack, and distributed systems in financial and regulated environments. Strong experience in Java/Spring Boot, C#/.NET, APIs, microservices, SQL, Kubernetes, CI/CD, testing, on-call support, incident response, and production reliability. Proven record of improving uptime, reducing incident-resolution time, optimising latency, modernising legacy systems, and supporting business-critical services used across multiple teams.

Relevant Skills

Java, Spring Boot, React, C#, .NET, Python, JavaScript, SQL, RabbitMQ, Kubernetes, Docker, Azure DevOps, CI/CD, Git, PostgreSQL, DB2, Agile, RESTful APIs, Microservices, Concurrent Systems/Multi-threading.

Professional Experience

Goldman Sachs – Software Engineer II. (Birmingham, UK). *August 2025 – Present*

Fullstack Developer – Compliance

- Lead architecture and end-to-end development of a firmwide compliance web platform serving **100+** internal users, supporting control workflows through scalable APIs, data modelling, and event-driven workflows.
- Optimised **3** high-latency API endpoints through backend and query-level improvements, reducing response times from 5+ minutes to 10 seconds.
- Designed, built, and launched a production-grade **Java, Spring Boot & React** application adopted by **7+** business units, maintaining **zero critical incidents** since launch and ensuring high availability through **EKS** multi-cluster, multi-pod deployment.
- Modernised **2 legacy applications** using Spring Boot, Hibernate, and React, leveraging GitHub Copilot to accelerate refactoring and test development while validating AI-generated code through peer review, automated testing, and secure coding practices.
- Documented system ownership details for **3** compliance-critical applications, including service dependencies, deployment locations, database information, and user guides to support production operations and knowledge sharing.
- Own production reliability across **3** compliance-critical applications and support the on-call rota for 7+ applications, triaging, debugging, and resolving production issues while contributing to a **30% reduction** in incident-resolution time and **99.9% uptime**.
- Tech Stack: **Java**, Spring Boot, SQL, **React**, BPMN, Kubernetes, Git, Jira.

Shell – Associate Software Engineer. (London, UK). *Sept 2022 – April 2025*

Backend Developer – Downstream Exchange

- Developed and optimised backend services for a **fintech** trading application supporting **\$25M+** in annual business value and **4B+** barrels traded, while maintaining **zero downtime**.
- Recognised in Shell's department newsletter for driving business value from the Manager of 'Trading & Supply Competency Centre'.
- Integrated external exchange-market data to construct dynamic price curves.
- Designed and delivered scalable, well-tested APIs while maintaining zero downtime.
- Improved the application's SonarQube rating by **25%** and achieved **100% test coverage** on new code.
- Conducted over **15 code reviews** and testing cycles to maintain high-quality standards across multiple project deliverables.
- Tech Stack: **C#** .NET Core, ASP.NET Core Web API, SQL, RabbitMQ, Docker, Git/GitHub, Jira.

Tech-Lead – Shell Intellytics (AI Capstone Project)

- Led a 5-person team to prototype and deliver a Python-based GenAI productivity application, translating analyst workflows into an AI-assisted user experience that improved productivity by an estimated **\$4,000 per month** and earned Shell's **5-star honours** recognition.

Deployment Manager – Downstream Pricing

- Managed **15+** production deployment cycles across multiple environments.
- Coordinated with Product Owners, Developers, and Business Analysts to protect uptime, validate API dependencies, and reduce release risk.

Education

University of Salford – BSc. Software Engineering. (Manchester, UK). *Sept 2019 – June 2022.*

- First Class Honours.
